

Chardon Tool

Relap Center

The purpose of the **RELAP CENTER** is to make it convenient to collect all tools needing relap; and make it simple to send tools needing relap to Chardon Tool.

Chardon Tool will relap **all** manufacturers' tools.

Here is how it works...

- The machine operators simply drop the tools needing relap in the box located on the top rack of the relap center. This assures that all tools needing relap are in one location (instead of: on tables, desks, at the machines, in tool boxes, etc.).
- The relap center provides tape and packaging materials.
- When there are 10-15 tools in the box (or whatever number is convenient for you), add some packing materials, tape the box, and hand it to your shipping department. The box already contains a pre-paid shipping label.
- Additional pre-labeled boxes are provided with the relap center
- Once a box has been taped and given to the shipping department, grab a new box from the relap center, tape the bottom, and place the box on the top rack of the relap center.
- You are now ready to collect additional tools needing relap.
- When you need additional boxes and packing materials, please call the number shown on the sign (located on the side of the rack); and we will send the shipping/packaging materials to you.
- The relap center measures 12" x 12" x 24" high.

Our process- When the package is received at Chardon Tool, we will inventory the contents and send you an email with the inventory and total cost. At this time, we will request that you send a purchase order to Laurie Burns, Customer Service. (You can also issue a blanket purchase order for a specified period; and we will process the orders against the blanket order)

CONVENIENT and **SIMPLE** !!!

Can we send a **RELAP CENTER** to you?
